

Technical data sheet BAG square- and rectangular formwork

Material:	Inner lining of hardboard made of wood with foil coating on one side. Encasing EPS structure. External reinforcement with special glass fiber reinforced adhesive tape.
Production diameters:	from 175 mm x 240 mm up to 600 mm x 600 mm.
Standard length	Square: 3&4 m. Rectangular: 3m.
Wall thickness:	min. 28 mm.
Types:	Smooth. Standard with 30 mm bevel and sharp edge.
Smooth:	Smooth, closed concrete surface by inserting the hardboard coated on one side.
Exposed concrete Classification:	With smooth finish SB4 in 3&4 m possible. Test concreting necessary.
Opening system:	The cutter knife is used to open the formwork from top to bottom. The formwork can then be opened.
Disposal:	Due to the composition of the material, the casing can be disposed of thermally without any problems.
Transport security:	square- and rectangular formworks get at least 2 EPS transport securities which are sticking inside the tube.
